Indoor & Outdoor geolocation

IIDRE is a hardware/software solution using the **ultra-wideband (UWB)** technology as a Design specialist.

With other **technologies (GPS RTK), IoT (IMU)** and **powerful algorithms**, we can provide to our customers much higher accuracy in real time than traditional positioning systems.

Indoor

1

Tracking

Use cases: autonomous engine control

- Easy deployment
- Range: 100 m
- Accuracy: 10 - 30 cm
- 100 positions per second
- Autonomy: 1 month
- Tailored solution

2

Supervision

Use cases: goods or people supervision

- PoE or wireless solution
- Range: 50 m
- Accuracy: 10 - 30 cm
- 1000 Tags simultaneously
- 100 positions per second
- Autonomy: 3 year++

3

Badges

Use cases: distances between persons or machines

- No infrastructure required
- Range: 50 m
- Accuracy: 10 - 30 cm
- 2 positions per second
- Autonomy: 3 days
- Logs generating and alerts

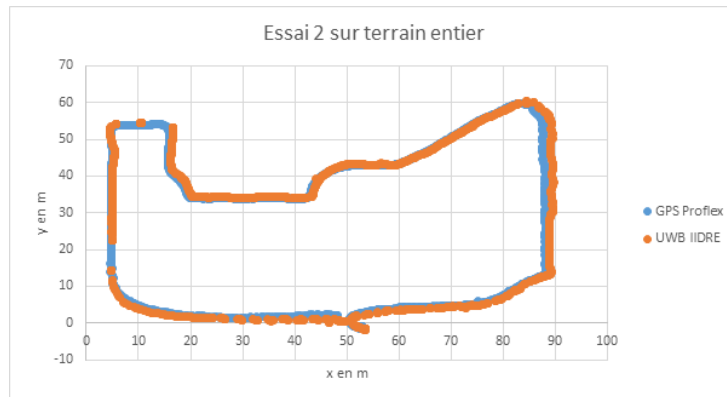

Outdoor

Centimeter Tracking

All use cases: autonomous engine control, equipment supervision or safety

- Easy deployment
- Accuracy: < 10 - 30 cm
- Tailored solution

What is about?

How an IoT solution can support the Manufacture Planning Management?

- How to quick **search** an equipment in real time and access to the **replay**?
- How to **track and trace** assets in real time?
- How to guarantee **safety** and **optimization** for all the engines **trajectory**?
- How to **avoid collision** between vehicles?
- How to provide an essential **real** and **precise geolocation** for the *Lean Manufacturing*?

Priority	Component	Num	Status text	Site	Status %	Nb anomalies	Planning delta	Delay
1	DIST	2659-2900	Finalization	Office5	90%	1	12 d.	Yes
2	APN	7712-2209	Tests on going	Test Office	25%	0	1 d.	No
3	SAFS	2567-6391	Ctrl on going	Ctrl Office	75%	2	3 d.	No

Lean indicators example

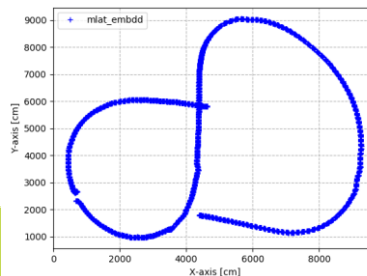

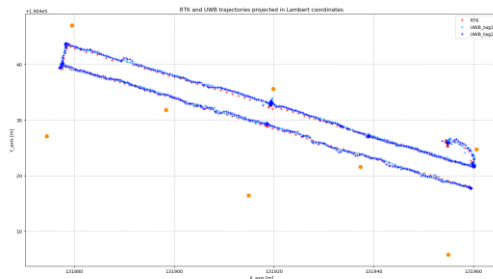

Use Cases

	Industry	Challenges	IIDRE solution
	For a leader in the Aerospace industry , Indoor robots (30) fleet management for the assembly of the great structures.	<ul style="list-style-type: none"> Moves through a narrow passage , less than 50 cm. Concentration of  electrical machinery. 	UWB indoor installation for robots tracking and positioning. Simple infrastructure, rapidly implemented.
	For a leader in the construction , extensive storage buildings (150 000 m2), forklifts (50) fleet management.	<ul style="list-style-type: none"> Moves through narrow corridor (- 2 m) Velocity (4m/s) 	Full solution package provided outdoor / indoor seamless navigation.
	For a company in the online sale , safety solution for the workers (10), to avoid any crash with mobile machinery (20).	 	Personal badge solution package without any infrastructure.

Assets track « on - premises » or « Cloud »

1. **Equipment search** and **track** software in real time with high precision.
2. Forklift **Track and Trace** solution with fixed beacon. Enable to build **diagram spaghetti** on Map with choice filters. Non-intrusive or linked system.
3. **Pedestrian prevention** warning. Personal badge with high vibration and beacon for engines with high level alarm to **avoid collision in real time**.
4. Collect data on local gateway for local server or Cloud and **access to the software** to lead his own **historical data** (metrics: distance, speed ... and data csv export).
5. Possible extension for seamless continuity with **outdoor** GNSS/GPS RTK geolocation.

The IIDRE Core Team

Michel Seyrac is an IT engineer with experiences as auditor, IT architect and project leader.

Olivier Audaire is a senior consultant with extensive international experience gained within high growth and innovative businesses across Europe and Africa.
